

July 2017

SLIP is being upgraded

Part of Landgate's business improvement program is to upgrade and streamline the services delivered through Shared Location Information Platform (SLIP). New SLIP services and maps will be launched between June and September 2017.

All SLIP users will move from the old SLIP Classic (Enabler) platform to the new Esri-based SLIP platform as soon as possible, SLIP Classic will shut down in late 2017.

To allow time to transition to these new services, Landgate will provide at least three months' notice before decommissioning the SLIP Classic services.

If you are still using SLIP Classic:

- the SLIP website will redirect you to data.wa.gov.au for datasets, services and maps
- all services will have new **URLs**
- **public services** will be provided in geospatial data themes
- in addition to OGC WMS and WFS new service formats will be available including **data downloads** and Esri rest services
- developers can access services via the **ArcGIS REST API**
- the ArcGIS REST API supports responses in several formats including JSON
- if you are a SLIP subscriber, more information on Landgate's subscription services will be available at www.landgate.wa.gov.au/SLIP
- Data Custodians can submit new datasets through the online self-service platform 'SLIP Self-Service'.

LandInfo WA subscription package

Designed exclusively for local government and the land development industry, this package delivers an easy to use SLIP solution combining data layers from Landgate Subscription and various agencies' public services. View the package details in the [Showcase](#) section of data.wa.gov.au. If the [tenure](#) service is included in your Landgate subscription licence you can also access and query tenure through the LandInfo WA map.

Landgate SLIP imagery services

New Imagery services will replace SLIP Classic and the WMTS service. These new services comprise five separate subscription services including a free public service, Locate Mosaic. Services will be accessible as OCG WMS, Esri Map and Esri Image services and all contain cohesive imagery indexes. Updated service details will be provided under the [Groups](#) section of data.wa.gov.au when available.

New streamlined services

Further [subscription](#) and [public](#) services will be made available through data.wa.gov.au. These streamlined services will replace SLIP Classic Public and Subscription services.

See the [groups](#) section of data.wa.gov.au for service details including OGC WMS/WFS, Esri Map, Esri Feature services and Data Download packages.

Some services such as [2011 ABS Census](#) data and [Western Power](#) are already available under the Groups section of data.wa.gov.au.

SLIP Public and Subscription services will be streamlined into two maps, one [public](#) and one [subscription](#) package. Each map will bundle the relevant services in one convenient place so you can spend less time discovering more.

Locate can still be found in the [Showcase](#) section of data.wa.gov.au along with other SLIP Maps such as [Geodetic online](#) and the [Map of the bushfire-prone areas](#).

SLIP online help centre

A new online help centre will provide a toolkit for data providers, customers, developers, professionals and decision makers, as well as support, advice, and assistance to SLIP Classic users to migrate to the new services as they are rolled-out.

SLIP enquiries

The Business Sales and Service (BSS) team – part of Landgate's Customer Service team – have been specifically trained to handle all your SLIP questions.

Migrate your account

To take advantage of SLIP's new services, please move your account to the new platform:

1. register a [new account](#)
2. activate your account when you receive the email prompt
3. your username is now your registered email address
4. access public data services and data downloads via data.wa.gov.au
5. for [Landgate subscription services](#) or other restricted services, contact the Business Sales and Services Team.
