Find address or place

Welcome to the Locate

If you are searching for Landgate property sales information and historical imagery from 1948 you can now find these in the new [MapViewer Plus](#). You can still view address and property boundary information in Locate.

For Firewatch - Fire Hotspots visit [MyFireWatch](#) which provides bushfire location information.

If you are looking for the Main Roads traffic feed visit the [Main Roads Travel Map](#)

Locate gives you all of SLIP's public data in one convenient place. View the [showcase](#) for further information about the themed services and layers contained here.

Overview of Widgets

The image shows a screenshot of the SLIP Locate V5 web application interface. The main map area displays an aerial view of a coastal area with a marina and residential streets. Various widgets and tools are labeled with white boxes and red arrows pointing to their respective locations on the interface.

Legend: Located in the top left corner, represented by a list icon.

Swipe widget: Located in the top left corner, represented by a double arrow icon.

Coordinate Conversion: Located in the top left corner, represented by an 'XYZ' icon.

Information about the map: Located at the top center, pointing to the top navigation bar.

Layer list: Located in the top center, pointing to the layer selection icon.

Basemap gallery: Located in the top center, pointing to the basemap selection icon.

Query widget: Located in the top center, pointing to the search icon.

Location and address search: Located in the top right, pointing to the search input field.

Share: Located in the top right, pointing to the share icon.

Add data: Located in the top right, pointing to the add data icon.

Print: Located in the top right, pointing to the print icon.

Draw and measure: Located in the top right, pointing to the draw and measure icon.

Zoom, location and fullscreen: Located in the bottom left, pointing to the zoom, home, and fullscreen icons.

Coordinate and scale: Located in the bottom left, pointing to the coordinate and scale information.

Map Overview: Located in the bottom right, pointing to the map overview inset.

SLIP Locate V5: Powered by SLIP. data.wa.gov.au. FAQs. Terms and Conditions. Feedback.

Find address or place: Search input field.

Map Overview: Inset map showing the current location within a larger geographic context.

Coordinate and scale: Shows the current coordinates (115.732 31.820 Degrees) and a scale bar (0, 50, 100m).

About and linked websites

These link off to web pages in a new window.

The About widget provides information on what is new in the current version of the map. There are also links to other popular maps and help guides.

What's new in this version.

New functionality in the share widget enables you to share the layers that are currently visible in the map. Please note though there is a limitation to how many layers you can have turned on otherwise the url will be too long to generate and will error. See the [help article](#) from Esri for more information about using this widget.

The swipe widget has been added which enables you to easily compare the content of different layers in a map. You can slide the swipe tool to reveal the content of another layer. For example, you may want to use it to show before-and-after imagery of a flood, or display two related thematic layers in a map. See the user [help article](#) for more information about this widget.

We have also added the Coordinate Conversion widget which enables users to input coordinates using one coordinate system and output to a different coordinate system using multiple notation formats. For more information about this widget and how to use see the [help article](#).

If you are searching for Landgate property sales information and historical imagery from 1948 you can now find these in the new [MapViewer Plus](#). You can still view address and property boundary information in Locate.

For Firewatch - Fire Hotspots visit [MyFireWatch](#) which provides bush fire location information.

If you are looking for the Main Roads traffic feed visit the [Main Roads WA Travel Map](#).

Locate gives you all of SLIP's public data in one convenient place. View the [showcase](#) for further information about the themed services and layers contained here.

Query widget

The query widget provides pre-defined searched on various layers.

Fill out the criteria and then click apply. Results will then appear on the map. If there are multiple results you can select one in the query window and it will show on the map. The query is also added to the layer list for your session so you can toggle it on or off.

Basemap gallery, draw and measure widgets

The basemap gallery widget allows you to toggle between different basemaps. Please note you will need to turn off the Locate imagery layer to view the basemap.

The draw widget allows you to draw on the map and customise the style, colours and other features.

The measure widget allows you to measure lines or areas.

This personal use licence provides that by opening, viewing or using this data, you agree to only use this data for

Add Data and Share

You can add other services from various formats. Once you have copied in the URL click add then navigate back to the layer list widget and the service added will now appear at the top of the list.

You can share the app via email, Facebook, Twitter and Google+. In the sharing options you can customise a marker and there is also the ability to save the layers visible when you share. Please note if you have too many layers on when sharing it will error (this is a limitation of Esri that you can only share limited layers). You can also embed the app in a website by copying the HTML code and pasting into your website.

Coordinates and location

In the bottom left corner of the map are some widgets to help with location and coordinates. The + and - are to zoom in and out. The house icon is to return to the default extent. There is also a My Location widget that will zoom to your location that it detects from your computer or mobile device (works best on mobile devices as some computers may be set to a different server location). The full screen widget allows you to extend the map to your screen. The scale bar is set in meters to help you measure a distance.

The coordinate widget allows you to choose between different coordinate systems. Web Mercator is displayed by default when you move your mouse around the map. To select GDA 94 you will need to select this coordinate system then click somewhere on the map to add a point and the coordinates will display.

The coordinate conversion widget allows you to select an input coordinate system and see the output coordinate systems for a particular point on the map.

Swipe layers

The Swipe widget enables you to easily compare the content of different layers in a map. It provides a vertical mode to slide the swipe tool around to reveal the content of another layer. For example, you may want to use it to show current and historical imagery of a townsite or display two related thematic layers in a map.
